

Hands-on Lab: CREATE, ALTER, TRUNCATE, DROP into Tables in MySQL using phpMyAdmin

Estimated time needed: 20 minutes

In this lab, you will learn how to create tables and load data in the MySQL database service using the phpMyAdmin graphical user interface (GUI) tool.

Software Used in this Lab

In this lab, you will use [MySQL](#). MySQL is a Relational Database Management System (RDBMS) designed to efficiently store, manipulate, and retrieve data.

To complete this lab you will utilize MySQL relational database service available as part of IBM Skills Network Labs (SN Labs) Cloud IDE. SN Labs is a virtual lab environment used in this course.

Database Used in this Lab

MySQL_learners database has been used in this lab.

Objectives

After completing this lab, you will be able to use phpMyAdmin with MySQL to:

- Create a database.
- Create a new table in a database.
- Add, delete, or modify columns in an existing table.
- Remove all rows from an existing table without deleting the table itself.
- Delete an existing table in a database

Exercise

In this exercise through different tasks, you will learn how to create tables and load data in the MySQL database service using the phpMyAdmin graphical user interface (GUI) tool.

Task A: Create a database

1. Click on **Skills Network Toolbox**. In **Database** section, click **MySQL**.

To start the MySQL click **Start**.

2. Once **MySQL** has started, click on **phpMyAdmin button** to open **phpMyAdmin** in the same window.
3. You will see the phpMyAdmin GUI tool.

In this lab, you will learn some commonly used DDL (Data Definition Language) statements of SQL. First you will learn the CREATE statement, which is used to create a new table in a database. Next, you will learn the ALTER statement which is used to add, delete, or modify columns in an existing table. Then, you will learn the TRUNCATE statement which is used to remove all rows from an existing table without deleting the table itself. Lastly, you will learn the DROP statement which is used to delete an existing table in a database.

How does the syntax of a CREATE statement look?

In this exercise, you will use the CREATE statement to create two new tables using Db2.

- 1. You need to create two tables, **PETSALE** and **PET**. To create the two tables PETSale and PET, copy the code below and paste it to the textarea of the **SQL** page. Click **Go**.

```

7. );
8.
9. CREATE TABLE PET (
10.    ID INTEGER NOT NULL,
11.    ANIMAL VARCHAR(20),

Task C: ALTER using ALTER COLUMN

1. Change the data type to **VARCHAR(20)** type of the column **PET** of the table **PETALE** and show the altered table. Copy the code below and paste it to the textarea of the **SQL** page. Click **Go**.

```
1. 1
2. 2
1. ALTER TABLE PETALE CHANGE PET PET VARCHAR(20);
2. SELECT * FROM PETALE;

```
1. 1
2. 2
3. 3
1. ALTER TABLE `PETALE` CHANGE `PET` `ANIMAL` varchar(20);
2.
3. SELECT * FROM PETALE;
```

In this exercise, you will use the TRUNCATE statement to remove all rows from an existing table created in exercise 1 without deleting the table itself.

1. Remove all rows from the **PET** table and show the empty table. Copy the code below and paste it to the textarea of the **SQL** page. Click **Go**.

```
1. 1
2. 2
3. 3
1. TRUNCATE TABLE PET ;
2.
3. SELECT * FROM PET;
```

Copied!

In this exercise, you will use the DROP statement to delete an existing table created in exercise 1.

1. Delete the **PET** table and verify if the table still exists or not (SELECT statement won't work if a table doesn't exist). Copy the code below and paste it to the textarea of the **SQL** page. Click **Go**.

```
1. 1
2. 2
3. 3
1. DROP TABLE PET;
2.
3. SELECT * FROM PET;
```

Copied!

Congratulations! You have completed this lab, and you are ready for the next topic.
