Hands-on Lab: String Patterns, Sorting and Grouping in MySQL using phpMyAdmin

Estimated time needed: 20 minutes

In this lab, you will learn how to create tables and load data in the MySQL database service using the phpMyAdmin graphical user interface (GUI) tool.

Software Used in this Lab

In this lab, you will use MySQL. MySQL is a Relational Database Management System (RDBMS) designed to efficiently store, manipulate, and retrieve data.

To complete this lab you will utilize MySQL relational database service available as part of IBM Skills Network Labs (SN Labs) Cloud IDE. SN Labs is a virtual lab environment used in this course.

Database Used in this Lab

The database used in this lab is an internal database. You will be working on a sample HR database. This HR database schema consists of 5 tables called EMPLOYEES, JOB_HISTORY, JOBS, DEPARTMENTS and LOCATIONS. Each table has a few rows of sample data. The following diagram shows the tables for the HR database:

SAMPLE HR DATABASE TABLES **EMPLOYEES** 5631 Rice, OakPark,IL 100 E1001 John Thomas 123456 1976-01-09 100000 30001 E1002 123457 1972-07-31 Alice James 80000 30002 JOB_HISTORY JOBS MAX SALAR EMPL_ID JOB TITLE 100 E1002 2010-08-16 200 60000 80000 2016-08-10 40000 60000 DEPARTMENTS LOCATIONS LOCT ID DEPT ID DEP DEP NAME DEP ID LO 2 Architect Group L0001 L0001 2 L0002 Software Development 30002 L0002 30003 L0003 L0003 Design Team

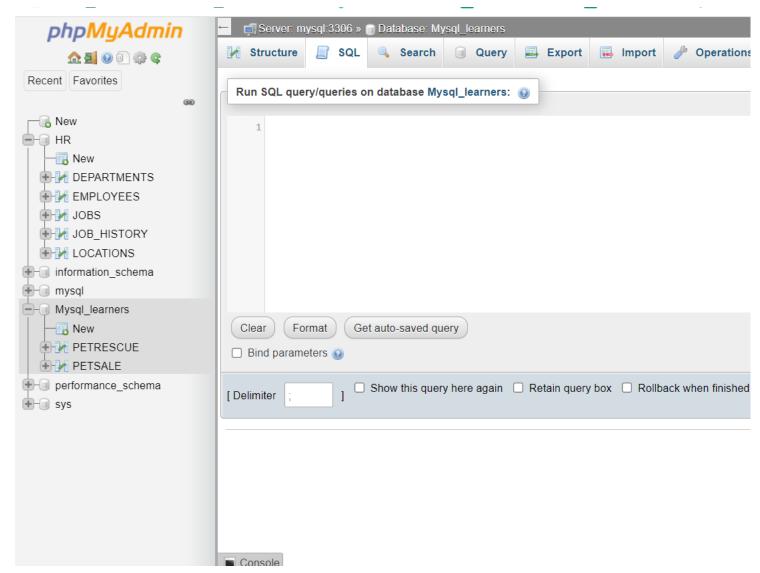

Objectives

After completing this lab, you will be able to:

- Simplify a SELECT statement by using string patterns, ranges, or sets of values
- · Sort the result set in either ascending or descending order and identify which column to use for the sorting order
- · Eliminate duplicates from a result set and further restrict a result set

Once the tables are loaded open the sql editor to start executing the functions.

about:blank 1/4

Exercise 1: String Patterns

In this exercise, you will go through some SQL problems on String Patterns.

1. Problem:

Retrieve all employees whose address is in Elgin,IL.

- ► Hint
- ► Solution
- ► Output
- 2. Problem:

 $Retrieve\ all\ employees\ who\ were\ born\ during\ the\ 1970\ s.$

- ► Hint
- ► Solution
- Output
- 3. Problem:

 $Retrieve\ all\ employees\ in\ department\ 5\ whose\ salary\ is\ between\ 60000\ and\ 70000.$

- ► Hint
- ▶ Solution
- ▶ Output

Exercise 2: Sorting

In this exercise, you will go through some SQL problems on Sorting.

about:blank 2/4

29/09/2023, 23:07 about:blank

1. Problem:

Retrieve a list of employees ordered by department ID.

- ▶ Hint
- ► Solution
- ▶ Output
- 2. Problem:

Retrieve a list of employees ordered in descending order by department ID and within each department ordered alphabetically in descending order by last name.

- ► Hint
- ▶ Solution
- ► Output
- 3. (Optional) Problem:

In SQL problem 2 (Exercise 2 Problem 2), use department name instead of department ID. Retrieve a list of employees ordered by department name, and within each department ordered alphabetically in descending order by last name.

- ▶ Hint
- Solution
- ► Output

Exercise 3: Grouping

In this exercise, you will go through some SQL problems on Grouping.

NOTE: The SQL problems in this exercise involve usage of SQL Aggregate functions AVG and COUNT. COUNT has been covered earlier. AVG is a function that can be used to calculate the Average or Mean of all values of a specified column in the result set. For example, to retrieve the average salary for all employees in the EMPLOYEES table, issue the query: SELECT AVG(SALARY) FROM EMPLOYEES;. You will learn more about AVG and other aggregate functions later in the lecture **Built-in Database Functions**.

1. Problem:

For each department ID retrieve the number of employees in the department.

- ► Hint
- Solution
- ▶ Output
- 2. Problem:

For each department retrieve the number of employees in the department, and the average employee salary in the department.

- ► Hint
- ► Solution
- ► Output
- 3. Problem:

Label the computed columns in the result set of SQL problem 2 (Exercise 3 Problem 2) as NUM EMPLOYEES and AVG SALARY.

- ► Hint
- Solution
- ► Output
- 4. Problem:

In SQL problem 3 (Exercise 3 Problem 3), order the result set by Average Salary...

- ▶ Hint
- Solution
- ▶ Output
- 5. Problem:

In SQL problem 4 (Exercise 3 Problem 4), limit the result to departments with fewer than 4 employees.

- ► Hint
- ► Solution
- ► Output

Solution Script

If you would like to run all the solution queries of the SQL problems of this lab with a script, download the script below.Import the script to phpadmin mysql interface and run. Follow Hands-on Lab : Create tables using SQL scripts and Load data into tables on how to upload a script to phpmyadmin console and run it.
